

# S3-Link 6.2 - Release Notes

## Introduction

The following new enhancements have been done in the 6.2 release of S3-Link. In addition to these enhancements, various issues have been fixed. Last Modified Date: 20th February 2022

## Features

Following changes have been added in this release. Let us know if you need any additional information.

1. Added support for client side encryption. So files will be now encrypted client side before upload start from Salesforce to Amazon S3
2. Added support for Wasabi storage. Now you can store your documents in Wasabi instead of Amazon S3
3. Send email to external users with a passcode protected link for upload documents for specific Salesforce record
  - a. Make the upload link a one time use link. If it is a one time use link, the link will auto expire once the documents are uploaded via that link
  - b. Set expiry duration for the upload link expiry
4. Set expiry for password protected download link sent to external users via email
5. Added configuration to show files and folders count for each folder in File Explorer
6. Show any S3-File & S3-Folder field as title in File Explorer UI
7. Added method to update AWS metadata for file
8. Allow only folders related to the current Salesforce record as the target folder to copy or move files
9. Copy or move files inside any specific folder of the selected target Salesforce record
10. Use S3-Files Selector with Image Preview to select files which need to be copied or moved
11. Removed additional queueable jobs to set the AWS file permission after S3-Files is created in Salesforce
12. Hide file name in the mass file preview component
13. Show multiple file detail fields in the file preview component
14. Added action to get public AWS link for files in S3-File Search and S3-File Explorer component

15. Open public AWS link in new browser tab on click of file name in S3-File Search
16. Email files related to parent record via email files component
17. Added global apex method to move files from one folder to another
18. Upload files in the parent record of the current record
19. Preview files related to the parent record of the current record
20. Show files of parent record in child record detail page
21. Open file previews for folders from File Explorer
22. Added configuration to use any character as the replacement of special characters(? And /) in the file and folder name
